Aims

Californians access and engage in **advanced primary care** that is equitable and incorporates collaboration with high-value specialty expertise.

Californians experience reduced morbidity, mortality and inequities in care and health outcomes, with a focus on **cardiovascular disease**, **diabetes** and **maternal health**.

Drivers of Improvement

- Spread adoption of and success in value-based payment models through multi-payer alignment, care team support and harmonization of measures and reporting.
- Expand the integration of behavioral health care into primary care with improved quality and access.
- Increase collection and exchange of accurate and complete patient self-reported demographic data (e.g. REaLD, SOGI) for use in care and quality improvement.
- Improve postpartum care and maternal mental health through integration with adult and pediatric primary care.
- Address socials needs through support to care teams and payers to utilize existing community-based services and organizations.
- Equip payers and delivery systems to build partnerships and engage in dialogue to meaningfully impact health equity and social drivers of health in our communities.
